PROJECTS

Built game (car racing) using pygame, python and conducted testing and debugging to ensure smooth gameplay experience.

Conducted data cleaning and preprocessing tasks as part of a Kaggle project. This involved handling missing values, outlier detection, and data transformation to prepare datasets for analysis.

Experience in data manipulation by using Pandas for various Kaggle projects. Demonstrated skills in data cleaning and analysis, including handling missing values, merging datasets, and performing complex data operations.

Building AuctionBT, a web application that simulates real-life auction scenarios. As a Full Stack Developer, I handled both backend and frontend development, including server-side logic, database management, and user interface design.

CERTIFICATIONS

Certification in Data Analysis Using Python

Completed a one-month course on Coursera which focused on data analysis techniques using Python, including data manipulation, visualization, and statistical analysis.

Certification in Data Manipulation and Cleaning

Data Cleaning and Preprocessing tasks such as handling missing values, outlier detection, and data transformation to prepare datasets for analysis. Data Manipulation with Pandas for data manipulation techniques using Pandas, including merging datasets, handling missing values, and performing complex data operations.

EDUCATION

Middle School

Sonamthang Central School, Zhemgang 2015-2018

High School

Zhemgang Central School, Zhemgang 2019-2020

HARD SKILLS

HTML –Good
CSS — Good
Basic Javascript —Good
Basic Penetration test —Good

SOFT SKILLS

Leadership — Fluent
Organization —- Very good
Problem Solving —- Very good
Management —- Very good
Speaking —- Fluent
